

A joint letter from 14 environmental NGOs active in south eastern Australia, co-ordinated by the Chipstop Campaign http://www.chipstop.savetheforests.org.au/PO Box 797, Bega NSW 2550, Australia

Mr Richard Allely Chief Executive Officer and Managing Director PMP Limited Level 12, 67 Albert Ave Chatswood NSW 2067

Dear Mr Allely

RE: PURCHASE OF NIPPON PAPER PRODUCTS

We are writing to you as conservationists fighting to protect Australia's remaining native forests.

Your company has been referred to in printing trade media in recent months as a customer of Nippon Paper products.

It has been reported that your company was a buyer of Nippon Paper products prior to the tsunami and may resume buying them once production returns to normal.

We are asking that you do not resume buying from Nippon Paper until it ceases using woodchips from native forests.

Nippon Paper is the owner of the South East Fibre Exports woodchip mill at Eden, NSW. Most of the production from that mill is exported to Nippon Paper mills in Japan. Eden is Australia's oldest woodchip mill. It has been highly controversial since its establishment in 1970. Since then it has been the driving force for untold destruction of native forest for hundreds of kilometres around the mill in south east NSW and East Gippsland (see attached photos).

To Australian forest campaigners it has enormous significance and symbolism because of its status as Australia's first and most destructive export woodchip mill.

Eden is the only region in NSW where trees are felled for the primary purpose of woodchipping, with over 90 % of native forest timber felled in the region ending up as woodchips.

(Continued from page 1)

After years of pressure, the chipmill has failed to respond to environmental concerns; indeed in the past few months it has built a pellet plant to convert residues of woodchipping into wood pellets and kitty litter.

It also has plans to build Australia's first power station fuelled mostly by native forest wood at the Eden chipmill.

If you would like any further information on any aspect of the chipmill's operations, we would be happy to supply this.

Nippon Paper in Japan in August 2011 announced plans to dramatically cut its production, so may not be a reliable supplier into the future in any case.

Paper production globally is moving rapidly towards recycled and plantation sources, and consumers are requiring paper products that are not sourced from native forests. Nippon has failed to respond to this reality, and instead continues to use native forest wood, resulting in widespread environmental impacts on our forests.

For the sake of Australia's forests and the environmental reputation of your company, we ask that you make a decision to source your paper either from soundly managed plantations, preferably with Forest Stewardship Council certification or from recycled material.

The groups represented in this letter are requesting an opportunity to meet with you to discuss this matter. I look forward to hearing from you.

Yours sincerely

Harriett Swift
